

MOKANA

INDUSTRIAL VINTAGE LIFESTYLE FURNITURE

E110

Product information

Structure

- ① Covering leather or fabric
- ② Frame solid wood elements and furniture boards
- ③ Wave springs with fleece cover
- ④ High resilience foam HR3020 + VP30
- ⑤ Back made of elastic belts and high resilience foam VP30
- ⑥ Metal legs or glides

Feet standard

Metal black (powder covering) leg – op. 105

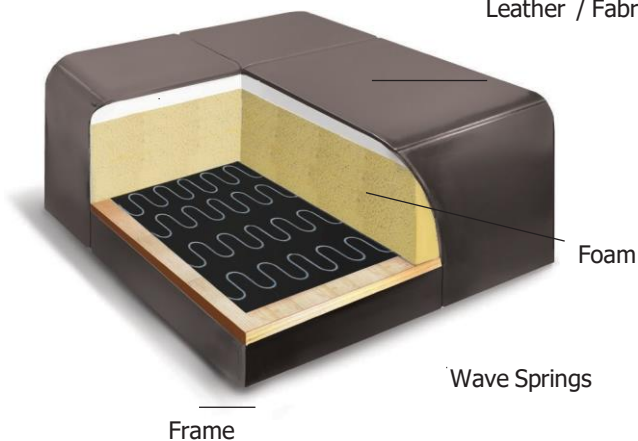

Stainless steel black leg (glides) – op. 107

Option 156 – powder coated feet (white/gray/pearl gold)

Polyester
Wadding

Leather / Fabric

Seating comfort

The seats with polyurethane foam provide a feeling of perfect softness and elasticity. Wave springs, high resilience foam with fluffy non-woven fabric in the seat.

Product information

Seat

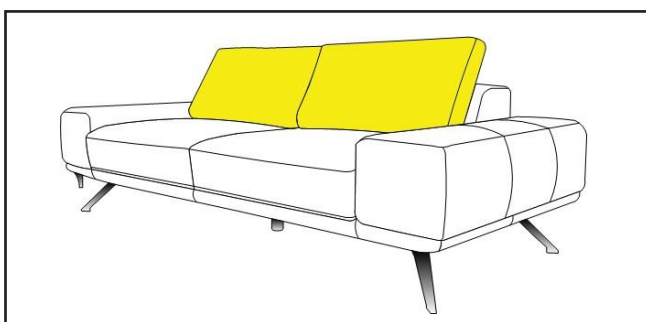

Electric seat extension mechanism, controlled by sensor panel placed between left armrest and seat cushion (under right hand). The mechanism extends two seats simultaneously (there is no option to regulate them separately).

**Additional options**

Possibility to choose battery-powered mechanism.

Color zones

Possibility to produce multicolour furniture according to coloristic zones.

**Folding of leather**

After unpacking, the furniture upholstered with natural leather and fabric can reveal deformation of soft parts, irregular folds or creases. These are not defects subject to complaint. They result from transporting packaged furniture. If you unfold and leave the furniture at room temperature for some time, it will acquire its proper shape.

You can help the process by shaping all soft parts of the furniture by hand.

When you use your furniture

When you use furniture with a particularly soft filling (e.g. fluffy fabrics), it is necessary to shape the pillows of backrests, seats and armrests from time to time. Doing this will make sure that the filling is distributed evenly and improve the comfort and appearance of your furniture.

Leather and fabric processing

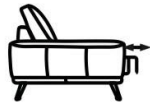

The stitches on the upholstery can be different for fabric and leather variants.

Attention

The armrests and backrests are not suitable for sitting. If the model is ordered in leather, additional seams can occur! For technical reasons, each element with 1 armrest always requires a base element in the connection (ottoman, long chair, corner). Every element without armrests needs this basic element on both sides. In order to protect the floor from possible scratches, it is advisable to provide the furniture with felt pads and always to lift it, not to move it across the it.

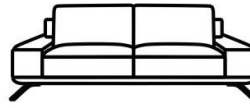

No liability is accepted for use-related impressions or traces of abrasion on sensitive floors. The product characteristics of the goods, warranty, safety, usage and maintenance instructions can be found in the information manual. The specified furniture dimensions are approximate, a tolerance of +/- 4 cm is reserved. We reserve the right to make improvements in quality, as well as changes to the product that correspond to

technical progress, but have no influence on functionality and usage properties, as well as corrections of erroneous information.
